## AutoCAD

In the 1980s, when the Apple Macintosh was introduced, there was considerable hype and advertising for AutoCAD Product Key. The application was considered revolutionary at the time because it allowed two designers to share a single workstation, drawing, and project. AutoCAD has since become the standard tool for architects, interior designers, and mechanical and electrical drafters. AutoCAD replaced microstation (a development of some of the original MIT CAD software) as the standard CAD program in the mid 1980s. AutoCAD is still used to create a variety of 2D and 3D drawings (plans) of various designs including industrial designs, homes, commercial buildings, and the like. Typical Applications AutoCAD is used in the following industries and companies: Architects Designers Structural Engineers Mechanical Engineers Civil Engineers Interior Designers Decorators Electrical Engineers Shipbuilders Building inspectors AutoCAD User Skills AutoCAD offers a variety of tools that are generally utilized by a user to create professional 2D and 3D drawings. The original graphics engine was designed and built by the same team that produced the x86 processor used in the Apple Macintosh. The technology used in the original AutoCAD graphics engine was very different from the graphics engines used in the 1980s and today. The original AutoCAD graphics technology was optimized to work directly with the Apple Macintosh's graphics pipeline, and it was a highly efficient method of creating 2D and 3D graphics. The original graphics engine had a performance advantage over the commercially available graphics engines of the 1980s and 1990s. This technology was a milestone for computer graphics, and AutoCAD was the first commercially available CAD software to use it. The original graphics engine was based on the 1982 Apple Macintosh 128K. AutoCAD was created using the Macintosh 128K system architecture and graphics pipeline. AutoCAD's graphics engine was developed in parallel with

Category:RevitBaghdad, Iraq - Iraqi forces opened a new front against the Islamic State of Iraq and the Levant (ISIL) in the northwestern Anbar province on Saturday, in an assault that saw the insurgents lose several key positions. Anbar's provincial capital of Ramadi is considered the main stronghold of the militants and remains firmly under the control of the Sunni extremist group. The campaign launched on Friday by the Iraqi forces - supported by US-led coalition air strikes and with US military advisers on the ground - is the biggest operation in the country since the Iraqi army and federal police drove the ISIL fighters out of the northern city of Mosul in July. The aim is to clear all of the province of ISIL - an ambitious but almost impossible target. The offensive comes two weeks after the recapture of Baiji, the site of Iraq's largest oil refinery, after ISIL attacked the facility on July 17, seizing and burning it. Nouredine al-Saadi, an Anbar native, said the recent advances had thrown the group into a crisis. "They are trying to bring new tactics to cope with the new threats," he said, adding that ISIL had no infrastructure to defend. "
