What's New in the?

---------------------- DVR-MS Renamer is a utility that can be used to create an easy automatic method to rename your recorded DVR-MS files using the metadata saved inside a DVR-MS. It can also be used to rename your media files using a specific naming format or by manually entering the desired filename. The interface and options are very simple and direct. It will try and quickly rename your files and will allow you to quit the process easily when you're done. Usage: ----- The first time you run DVR-MS Renamer it will ask you if you want to use your default media files or use a set of filenames that you have already gathered (consult this topic for more info). After it loads the metadata, the program will then start the renaming process. When you have completed your renaming process, you can press the OK button and it will remind you that you can quit the process easily. Editing your current settings: ---------------------------- The options you can configure for DVR-MS Renamer are: - MediaBrowser: Use if you already have a set of files and would like to rename all the existing ones. This will obviously work better with this kind of files. - Browse directory: If you would like to rename all the files in a specific directory (e.g. \001\20150\ or something). - Naming format: The naming convention that will be used to rename your files in order to match the media files specified in the [AttachedMediaFiles] section of your Xml file. If no naming convention is specified in your Xml, DVR-MS Renamer will automatically try to use the default of dvr-ms-shows-xxx. - MediaIDs for renaming: If you would like to manually enter the desired MediaIDs for your DVR-MS files. - Save Media IDs: If you would like to automatically use the values specified in the attached MediaIDs section when you rename your files. - Quitting process: If you would like to be able to quit the process easily. Furthermore the program will remind you when the renaming process has reached a point that it has not yet completed and you can press the CANCEL button to end the process. If you need to quit the process (e.g. if you have a fast connection and the program has been running for a long time), press the EX
