The OMNI2 framework predicts strong longitudinal structure in solar wind interplanetary turbulence driven by outgoing Alfvén waves that have low magnetic field strengths. Interactions between Alfvén waves in the poloidal plane and the in-plane magnetosonic mode in the fast magnetosonic mode can act to generate current structures in the poloidal plane, which has been observed in slow solar wind observations. This suggests that the wave-current interactions are an important component of 3D solar wind turbulence. We would like to thank the IPS and EPS teams for their help and support for this work.
