downloading with a torrent takes a lot of time and bandwidth. that's why you can

have multiple torrents running at once. when you're downloading with a torrent, you'll be able to view the list of the torrents you're downloading and the files they contain. you'll also be able to see the estimated time left before the file is finished. you can then click the download button for each file, which will start the torrent download for that file. some people like to download multiple torrents at once. for this, you'll need to use a multi-torrent downloader like downthemall. this program will download torrents at once and then launch them all at once. you can adjust the time it takes to start each torrent, allowing you to start the torrents as soon as they're finished. you can also use it to organize your downloads. for example, you can create categories for different file types, such as movies, music, or books. if you'd like to know how much longer it will take to download the torrent, you can hover your mouse over the download link for each

torrent to see its estimated time left. you can also right-click the download link and choose to pause the torrent. this means you can resume the download at a later time. poxxy is a specialized private tracker for movies. it is not related to rarbg, or the official mediafire trackers. poxxy has high upload speeds, and low ratio requirements. the site also has a very active irc channel for general use. some features include: hidden downloads, user ratings, sorting options, user lists, file type support, and hidden category support. poxxy also has a large torrent database, with roughly 40,000 movies, the site itself was launched on the 17th of june, 2006. as of the 17th of september, 2007, the site has roughly 4000 members. 5ec8ef588b
