Photoshop comes in two versions, Lightroom and Photoshop, which are very different in functionality. Lightroom is a basic photo editing and organizing tool, essentially an easy interface for grouping or importing, managing, sharing and tagging photos. Photoshop is an advanced image editing and design tool. Features unique to Photoshop include Photoshop brushes, video tools, live masking, layers, transparent layers, seamless vector editing, and a huge range of special effects. Lightroom is a standard computer application and Photoshop is a standalone application. Lightroom is an image organizing application and Photoshop is also a stand alone photo editing application. Photoshop has a design feature suite (such as the Gradient Mesh and Patterns & Transforms panels), while Lightroom only has editors that are dedicated to just organization and not photo editing. Photoshop has a full image editing and design suite while Lightroom only offers a basic organization and editing function. Photoshop gets updated in the autumn, but it is much more expensive than Lightroom 3. Photoshop CS5 is the latest version of Photoshop, while Lightroom 3 and Photoshop 7 are in-between versions. Photoshop CS5 costs more than Adobe Lightroom 3 or any Prismacolor or Magna paint that you can find at any art supply store. On the other hand, Photoshop users are much more open and you can find Photoshop training through Lynda.com and many college programs offer Photoshop training, for a small fee or even for free.
