The new Share for Review feature lets you quickly give stakeholders a link to view a Photoshop file, but it offers even more flexibility. To use Share for Review, you only need a Mac or PC with web access and the Adobe Creative Cloud installed. During the tour, we showed how a subject matter expert could disable and enable comments in different parts of the design by clicking. The new Feedback panel allows you to edit a file, set comments to view only, and even turn off comments from a single dialogue box. Comments are displayed with a linked image when on a web page. We also talked about the introduction of Comments in a Photoshop file. Comments allow any user with access to a Photoshop file to add improvements to the design. You can disable and enable individual comments, just like a comment stream in a web browser. Comments aren't editable, but their message can be linked to anywhere, including websites, blogs, and other Photoshop files. Comments are one of many new features in the new version of Photoshop, including content-aware scaling, the ability to preview artboards from a different device, and a new set of effects that let you create textures and layer effects without tools. In previous versions of Photoshop, designers created a document with a document camera. This document was then emailed out to stakeholders who would have to open the file on their computer, and then either send comments back or forward the file for a redesign.
