Links cm .Q: How to add multiple xml children to an existing element in xml file? My xml file looks  
like this: 100 abc.xml I want to add another child node to this file using xslt transformation. Let's say  
I want to add two more children like below: 100 abc.xml 1.1 Can I do this with xslt? A: If your input  
is XML fragment like 100 abc.xml then the following XSLT 1.0 template 100 abc.xml 1.1 applies a  
template matching data and outputs the XML fragment 100 abc.xml 1.1 Patented diastereoselective  
construction of chiral tertiary alcohols from aldehydes. Sulfonamidophenyl-substituted  
organocatalysts, 3,4-dihydroxybenzylamine and pyrrolidine in p-toluenesulfonic acid/acetonitrile at  
room temperature afford optically active tertiary alcohols in a diastereoselective fashion. This one-  
pot reaction conditions provide a practical method for the diastereoselective construction of chiral  
tertiary alcohols from readily accessible aldehydes.
