It is no secret that the majority of buyers of Adobe Illume Cloud Service get more value than they pay for. We spoke to many Illume users and discovered that loyalty to Illume is strong. Adobe has worked hard in the past few years to improve its online tools—the photo sharing and software development chops were sorely lacking from the company’s online offering—and it shows. The fact that the software interface is almost identical to regular Photoshop shows that Adobe is paying attention to and incorporating feedback from its users. With the new collection feature, you can now search for similar images in a creative environment created with Adobe Ideas (beta) and automatically sync them with your current open files. Sort or group similar images into a creative hub for quick browsing and reference. I have to say that the new features that support the idea of “real time review” do work well enough to be useful. The real surprise is that Lightroom Review (beta) also works fairly well and, when used with comments, saves a lot of time to make a smart compilation. Of course, both Lightroom Review and Share for Review require that you install the Adobe Sensei platform first. At this point, it is unclear when this will be available to everyone and not just owners of the special Adobe Sensei Apps. Adobe Sensei gives us intelligent workflow to address the challenges that come with today’s increasingly digitally-driven world. It brings machine learning, artificial intelligence and natural language programming to diverse applications, and relies on a growing number of APIs to tap into the capabilities of cloud-based services. In addition to improving quality of life, Adobe Sensei is also empowering developers and businesses with new applications and offerings.
